### 16 FAIR VALUE OF FINANCIAL INSTRUMENTS

Financial instruments comprise of financial assets and financial liabilities.

Fair value of financial instruments are not materially different from their carrying values except for certain financial assets available for sale which are carried at cost less impairment and medium term notes whose fair value amounts to KD 708,543 thousand (31 December 2016: KD 645,775 thousand). For financial assets and financial liabilities that are liquid or having a short-term maturity (less than three months) it is assumed that the carrying amounts approximate to their fair value. This assumption is also applied to demand deposits, savings accounts without a specific maturity and variable rate financial instruments.

Fair value of quoted securities is derived from quoted market prices in active markets, if available. For unquoted securities, fair value is estimated using appropriate valuation techniques. Such techniques may include using recent arm's length market transactions; reference to the current fair value of another instrument that is substantially the same; discounted cash flow analysis or other valuation models.

The fair values of the funds that are listed on active markets are determined by reference to their quoted bid prices. The fair values of unlisted funds are based on net asset values which are determined by the fund manager using the quoted market prices of the underlying assets, if available, or other acceptable methods such as a recent price paid by another investor or the market value of a comparable company.

### Fair value hierarchy

The Group uses the following hierarchy for determining and disclosing the fair values of financial instruments by valuation technique:

Level 1: quoted (unadjusted) prices in an active market for identical assets and liabilities;

Level 2: other techniques for which all inputs which have a significant effect on the recorded fair value are observable, either directly or indirectly; and

Level 3: other techniques which use inputs which have a significant effect on the recorded fair value are not based on observable market data.

The following table shows an analysis of financial instruments recorded at fair value by level of the fair value hierarchy:
